

# Simplify

## ***the Management of Your Employee Benefits with your own **customized** Internet Web Portal.***

***Keep track of benefits and related information  
in one concise location, 24/7.***

At Provident Financial Group, we believe investing in technology is imperative to running a smooth and efficient business. That is why we have invested in web portals for our clients. Having a web portal where our clients and their employees can change and view information about their health insurance will save them time and money.

The web portal offers a way for **employers** to:

- View and print documents for new-hires
- View plan changes and plan summaries for their company's employee benefits
- Post company-specific documents for employees to view.

This enables employers to communicate with their employees quickly and easily.

The **employees** also have access to the web portal where they can:

- View their benefits
- Look up network doctors
- View company-specific information.

Employees can request updates to personal information and request changes in their benefits plans. This keeps employees in the know as to how their benefits plans work.
